Overview

Santa Clara Multi-Family

12 Mo Delivered Units	12 Mo Absorption Units	Vacancy Rate	12 Mo Asking Rent Growth
675	1,286	5.1%	4.3%

Santa Clara's multifamily market entered 2026 on a strong footing, with demand continuing to outpace most other submarkets in the San Jose metro. The appeal of high-quality, transit-accessible communities near major employment centers supported robust leasing, even as the market worked through a historic wave of completions. Strong renter interest in modern, amenity-rich buildings helped the submarket maintain momentum amid broader regional moderation, reinforcing its position as one of the area's most resilient and sought-after housing nodes.

Demand trends reflect broad-based strength. The submarket absorbed 1,300 units over the past year, far exceeding long-term norms and posting the highest absorption total in the region. Hiring expansions in AI, advanced manufacturing, and other high-growth sectors continue to draw relocations, while a noticeable shift toward premium amenities has narrowed lease-up risk for new properties. Recent projects such as The Clara, AVE Santa Clara, and Orlo saw steady quarter-to-quarter occupancy gains as concessions tapered and leasing velocity accelerated.

A substantial wave of new supply arrived in 2025, led by major deliveries in Tasman East and along Coleman Avenue. Projects such as The Clara, Passero, AVE Santa Clara, and Alba collectively contributed to a significant expansion of the high-end inventory base. These deliveries initially elevated vacancies, but renter demand is quickly absorbing most of the added units.

With development costs rising and financing challenges mounting, construction starts have slowed considerably. Although more than 5,000 units remain proposed, including the large-scale Related Santa Clara project and several Ensemble Investments developments, forward progress is expected to be gradual and phased.

Vacancy trends reflect the interplay between strong demand and substantial new supply. The submarket's vacancy rate fell over the past year as leasing kept pace with completions, settling at 5.1% in early 2026. Stabilized communities continue to operate near 4% vacancy, underscoring the depth of Santa Clara's renter pool.

Rent conditions strengthened meaningfully entering 2026. Asking rents posted firm annual growth across all quality tiers, while effective rent growth outperformed as concessions declined at stabilized properties. Newly delivered luxury communities continued to set the upper end of the market, with AVE Santa Clara and Orlo establishing premium rent benchmarks.

Looking ahead, leasing conditions are expected to tighten further as the submarket digests its recent wave of completions. Absorption is expected to remain positive, supported by continued employment growth in tech and advanced manufacturing. Deliveries are expected to slow sharply through 2026, which should put downward pressure on vacancy and support additional rent gains.

Vacancy

Leasing activity in Santa Clara remained exceptionally strong over the past year, even as a historic wave of new supply temporarily pushed vacancy higher. The submarket absorbed 1,300 units, the highest total in the San Jose metro, reflecting broad-based demand from renters seeking proximity to major employers and newly delivered, amenity-rich communities. The vacancy rate fell 170 basis points year over year to 5.1% in 2026Q2, as new units were absorbed. The stabilized vacancy rate remains near 4%, illustrating persistent underlying demand. New luxury deliveries in Tasman East posted the highest initial vacancy, while more established properties maintained tighter occupancy.

Leasing momentum strengthened through 2025 as demand kept pace with supply. Net absorption increased sharply compared with prior years, supported by relocations tied to hiring in AI, advanced manufacturing, and other growth sectors. An industry veteran noted that “lease-up risk has diminished as renters increasingly prioritize modern amenities,” a dynamic visible in strong leasing at properties such as The Clara (508 units), AVE Santa Clara (310 units), and Orlo (318 units).

Newly completed buildings captured a disproportionate share of recent leasing activity, reflecting renters' preference for transit-accessible locations and high-end amenity packages. Data from these properties show occupancy continuing to grow quarter by quarter, with concessions of up to eight weeks free rent gradually tapering as the buildings near stabilization.

Relative to national trends, Santa Clara continues to outperform. Vacancy in the submarket remains below the U.S. average for similar high-growth tech markets, and recent absorption totals rank among the strongest on the West Coast. The submarket's 12-month absorption of 1,300 units far exceeds its long-term annual average, underscoring the depth of its renter pool.

Outer Santa Clara remains the strongest-performing cluster, benefiting from its concentration of newly delivered institutional-grade assets near Caltrain, light rail, and major tech campuses. These neighborhoods have captured the bulk of recent absorption and lead the submarket in leasing velocity. Older areas, particularly those composed of 1 & 2 Star assets, continue to exhibit low turnover and stable occupancy, with renters staying longer due to relative affordability and limited competition from the for-sale housing market.

Performance by quality segment reflects the influence of the construction cycle. 4 & 5 Star units currently exhibit the highest vacancy due to lease-up, but continue to command strong rents supported by premium amenities and transit-oriented locations.

Looking ahead, leasing conditions are expected to tighten over the next several quarters as the submarket digests its recent wave of completions.

Rent

Santa Clara's apartment market continued to see strengthening rent conditions in early 2026, supported by solid demand for newly delivered, amenity-rich units and a slowdown in new construction. After stagnating in 2023, rents accelerated across 2024 and 2025 and entered 2026 with firm upward momentum. As of 2026Q2, the average asking rent has reached $3,640/month, up 4.3% year over year. Strong leasing velocity in recently completed luxury buildings and limited near-term supply additions have reinforced landlord pricing power. At the same time, one industry veteran observed that "renters are willing to pay extra for modern amenities," highlighting the ongoing shift toward higher-end product offerings.

Annual rent growth has strengthened steadily over the past two years, outpacing broader regional trends. Effective rent growth is higher than headline asking rent, driven by falling concessions, registering a 5.9% annual increase.

Submarket performance varies, with Outer Santa Clara leading rent growth, buoyed by its proximity to major employment hubs and the concentration of new, high-quality inventory. Older neighborhoods with a larger share of legacy stock posted more moderate appreciation but remain competitive due to their relative affordability. Newer nodes in Tasman East, supported by delivery of major communities such as The Clara, Passero, and AVE Santa Clara, continue to command the highest rents marketwide and are driving much of the upward pressure on average pricing.

Rent performance across quality tiers shows clear segmentation. 4 & 5 Star properties average $4,210/month, reflecting strong demand for premium finishes and amenities, and recorded 5.5% annual rent growth. 3 Star assets average $3,450/month, with a 2.5% increase, while 1 & 2 Star units remain the most affordable option at $2,400/month, growing 2.2% annually. Examples from recent lease-ups reinforce this hierarchy: AVE Santa Clara is achieving rents near $4,000/month, and Orlo averages roughly $4,200/month, cementing the high-end benchmark for newly built properties.

Concessions remain a notable feature in select luxury communities still navigating lease-up. Offers of up to eight weeks free rent are available at Alba and other new deliveries. However, discounting has receded at stabilized buildings, such as AVA Santa Clara.

Looking ahead, rent growth is expected to remain firmly positive through the remainder of 2026. With construction activity slowing and no new projects currently underway, the market is positioned to tighten further.

Construction

Construction activity in Santa Clara has slowed considerably following a surge of deliveries in the past year, when approximately 670 units were completed, more than half of all new inventory added across the broader metro during the year. Major transit-oriented developments in Tasman East and along Coleman Avenue drove this wave, including The Clara (508 units), Passero (371 units), AVE Santa Clara (310 units), and Alba (406 units), all designed with high-end amenities and modern features that continue to attract new residents.

With development costs up sharply and financing constraints limiting new starts, construction activity is decelerating. Developers report that underwriting requirements have shifted significantly, with return-on-cost expectations rising, making new projects increasingly difficult to justify.

Despite the decline in ongoing construction, Santa Clara maintains one of the region's most active pipelines, with more than 5,000 units proposed. This includes the 1,680-unit Related Santa Clara development and six planned Ensemble Investments projects totaling more than 1,200 units in Tasman East. Still, given current cost conditions and funding challenges, these proposals are expected to progress slowly and in phases.

Among Santa Clara's submarkets, Tasman East holds the largest portion of total units in the pipeline, anchored by several high-density, transit-served developments. The area has emerged as the core of the submarket's modern housing stock due to proximity to light rail, employment centers, and ongoing infrastructure investment. Coleman Avenue also accounts for a significant share of recent activity, highlighted by Alba's 406-unit delivery. These nodes remain the focal points for future growth as developers concentrate on locations with the strongest rent premiums and absorption performance.

Recent completions have performed well despite temporarily elevating vacancy. Orlo (318 units), delivered in 2024, is 87% leased, while The Clara and AVE Santa Clara have experienced steady absorption driven by strong renter interest in security, amenities, and new-construction quality. Additional recent projects include Lorien (225 units), The Lafayette (347 units), and The Meridian (59 units), each contributing to the diversification of available inventory. Newly built communities feature strong design elements, such as coworking spaces, fitness centers, lounges, and outdoor social areas, aligning with renter demand for high-end living environments. One industry veteran noted that renters “are willing to pay extra for modern amenities,” reinforcing continued demand for premium units.

Looking ahead, construction activity is expected to remain muted through the remainder of 2026 due to high costs, elevated interest rates, and cautious underwriting. Longer-term prospects, however, are supported by Santa Clara's strong employment drivers, particularly in AI and advanced manufacturing, and the sizable pipeline of entitled projects.

Investment activity in the Santa Clara multifamily submarket accelerated over the past year, driven by renewed buyer confidence and strong pricing for well-located assets. Trailing 12-month sales volume is $897 million, more than five times the annual average for the submarket over the past decade. The market has posted several high-water-mark trades since late 2024, with per-unit pricing frequently surpassing regional averages, reflecting deep capital interest despite elevated financing costs. Major tech-sector employment anchors and limited recent deliveries continue to underpin investor conviction, helping push transaction volumes higher compared to recent years.

Private equity groups, institutional buyers, and established multifamily investors have been the most active participants. Firms such as Interstate Equities, Acacia Capital, and other national operators have expanded their Bay Area portfolios, targeting assets with value-add potential or recently delivered buildings with strong lease-up performance. One industry participant noted that “tech-driven demand and a lack of new apartment deliveries are sustaining investor appetite, even as financing remains challenging,” underscoring why these buyer groups continue to lean into acquisitions across high-demand pockets of Santa Clara and its adjacent submarkets.

Across quality segments, pricing strength has been most pronounced among 4-Star and newer assets, where modern finishes, amenity packages, and proximity to major employment nodes command premium valuations. However, older 3-Star communities have also seen meaningful bidding activity when they offer scale and renovation upside. The submarket's ability to attract capital across vintage categories highlights investor willingness to pursue both cash-flowing stabilized assets.

Several major transactions underscore these trends. The largest deal of the year was Standard Communities' acquisition of Park Kiely, a 948-unit 3 Star property, for $370 million ($390,000/unit). The property's pricing reflects buyers' willingness to pay a premium for sizable, established communities in supply-constrained locations.

Another notable sale involved the Misora at Santana Row, a 212-unit 4-Star community that traded for $148.5 million, or $700,000/unit, well above Santa Clara County's typical per-unit average. With average asking rent close to $5,000/month, the sale illustrates institutional investor appetite for premium assets.

Looking ahead, sales activity is expected to remain elevated as investors continue to target the Santa Clara submarket's combination of entrenched tech-sector demand drivers, transit accessibility, and limited new supply.
